# **moltools Documentation**

***Release 1.0.0***

**Ignat Harczuk**

May 11, 2015

<b>1</b>	<b>Requirements</b>	<b>3</b>
<b>2</b>	<b>Installation</b>	<b>5</b>
2.1	Linux . . . . .	5
<b>3</b>	<b>Modules</b>	<b>7</b>
3.1	molecules.py . . . . .	7
3.2	use_generator.py . . . . .	7
3.3	use_calculator.py . . . . .	7
3.4	template.py . . . . .	7
3.5	read_dal.py . . . . .	8
<b>4</b>	<b>Testing</b>	<b>9</b>
<b>5</b>	<b>Bugs</b>	<b>11</b>
	<b>Python Module Index</b>	<b>13</b>

moltools is a package of scripts and modules I use daily in my research as a Ph.D. student to ease setting up and analyzing calculations.

Contents:

---

# Requirements

---

For bug-free performance, and full compatability, the latest source of the core dependencies are recommended.

The only hard-requirement is that python is the 2.7 version.

- numpy 1.9.1
- scipy 0.15.1
- matplotlib 1.4.3
- python-nose 1.3.4

Optional dependencies include:

- mpl\_toolkits
- h5py 2.5.0
- mayavi2 <http://mayavi.sourceforge.net/>
- DALTON any stable version for Alpha properties. <http://www.daltonprogram.org/www/download.html>
- DALTON (Development version, master branch commit 51601c2 and forward is fine) for Beta properties.

---

# Installation

---

Right now only installation on Linux is supported.

There is currently no plans to port this package to other systems.

## 2.1 Linux

1. Clone the repository `git@github.com:fishstamp82/dalton_tools.git`
2. set the PYTHONPATH environment variable to the target dalton\_tools/src path.

## 3.1 molecules.py

### 3.1.1 Atom

### 3.1.2 Molecule

### 3.1.3 Water

### 3.1.4 Rotator

### 3.1.5 Property

### 3.1.6 Cluster

## 3.2 use\_generator.py

## 3.3 use\_calculator.py

## 3.4 template.py

### `class template.Template`

This class holds data obtained by the LoProp transformation. Each template depends on 5 variables.

Variable	Choices	Type
Model:	TIP3P / OLAV	string
Method:	HF	string
Basis:	PVDZ/ANOPVDZ/ANOPVTZ	string
LoProp:	True/False	bool
Frequency:	Field $\omega$	string

```
>>> temp = Template().get()
>>> print temp ("01", "charge")
0.0

>>> temp = Template().get( model = "TIP3P", method = "HF",
                           basis = "ANOPVDZ", dist = True, freq = "0.0" )
```

```
>>> print temp ("01", "charge")  
-0.678
```

## 3.5 read\_dal.py

---

### Testing

---

The code uses continuous testing with [Travis CI](#).

Unit-tests can be launched by the user by running

```
$ nosetests
```

---

### Bugs

---

Bugs can appear in any shape, form or code.

If you find some bugs and want to fix them, it would be greatly appreciated!

Create a pull-request for the github [repository](#).
